

Scenario: Search Functionality

Week Prompt: Test the search feature

Rewrite Prompt:

Context

Act as a Senior QA Test Engineer with expertise in manual testing

Analyze the Search functionality and generate manual test cases

Instruction

[MANDATORY] Generate testcases for global search functionality for e-commerce application

[MANDATORY] Generate both functional and non-functional test cases

[STRICT] Include at least one performance/load scenario

[CRITICAL] Generate only positive test cases

[HIGHPRIORITY] Implement different test case techniques like Boundary Value Analysis (BVA), Equivalence Class Partitioning

[HIGHPRIORITY] Sort test cases by Functional, UI, Data Validation, Performance

Example:

TCID | Description | Priority | Preconditions | Test Data | Steps | Expected Result

Persona

Act as a Test lead to review the testcases

Output

Downloadable excel

Tone:

Professional Tone with clarity

Observations:

1. Well-defined Scope: Clearly specifies the feature under test (Global Search functionality for an e-commerce application).
2. Strong Quality Constraints: Ensures inclusion of Functional, Non-Functional, BVA, ECP, and Performance scenarios.
3. Deliverable Specification: Clearly states the desired output format (Downloadable Excel).

Scenario: File Upload

Week Prompt: Generate test cases for file upload

Rewrite Prompt:

Context

Act as a Senior QA Test Engineer with expertise in manual testing

Test file upload functionality is in HR portal where resumes are uploaded

Instruction

[MANDATORY] Generate 10 testcases for file upload functionality in HR portal

[MANDATORY] Generate both functional and non-functional test cases

[STRICT] File format should be in excel/work/pdf and size should be less than 10 MB.

[CRITICAL] Include security test cases

[HIGHPRIORITY] Implement different test case techniques like Boundary Value Analysis (BVA), Equivalence Class Partitioning

[HIGHPRIORITY] Sort test cases by Functional, UI, Data Validation, Performance

Example:

TCID | Description | Priority | Preconditions | Test Data | Steps | Expected Result

Persona

Review as test cases from security and functionality perspective as QA lead

Output

Downloadable excel and PDF formats

Tone:

Professional Tone with clarity

Observations:

1. Contextual Grounding: Knowing it's an HR portal immediately implies specific risks (PII data, specific file types like PDF/Word, resume parsing) which the AI can now tailor its test cases around.
2. Persona Prompting: Instead of giving generic advice, the AI responds with the rigor, terminology, and risk-awareness of a seasoned QA professional.
3. Output Format Specification: It solves the user's end-goal practically.

Scenario: API Testing

Week Prompt: Generate test cases for file upload

Rewrite Prompt:

Context

Act as a API Test Engineer using postman tool for REST API webservices.

Instruction

[MANDATORY] Generate API testcases for user login functionality as endpoint URI.

[MANDATORY] Validate validations for HTTP status code, Response code, Response body and response time.

[STRICT] Include validations for request payload should be json format

[CRITICAL] Include test cases SQL injection

TCID | Description |Priority| Preconditions| Test Data| Steps |Expected Result

Persona

Review as test cases backend test architect

Output

Downloadable postman Jason library files

Tone:

Professional Tone with clarity

Observations:

1. Role Adherence: Explicitly positioned as "API Test Engineer using Postman"
2. Validations: Specifically mentioned validations for response code, response body, JSON Payload Validation, security injections.
3. Script format: Ready-to-import Postman test scripts.
