

Jira integration to fetch user stories:

Please find below step-by-step process followed to integrate with Jira, fetching user stories, and generated the test cases.

The screenshot shows a web browser window at localhost:5173 displaying the 'User Story to Tests' application. The page has a light gray header with the title 'User Story to Tests' and a subtitle 'Generate comprehensive test cases from your user stories'. Below the header is a form with four sections: 'Story Title *' with a text input field containing 'Enter the user story title...'; 'Description' with a text area containing 'Additional description (optional)...'; 'Acceptance Criteria *' with a text area containing 'Enter the acceptance criteria...'; and 'Additional Info' with a text area containing 'Any additional information (optional)...'. A blue 'Generate' button is located at the bottom left of the form. The browser's taskbar at the bottom shows the Windows logo, a search bar, and various application icons. The system tray on the right indicates the date and time as 11:17 on Friday, 22-06-2026.

The screenshot shows the same 'User Story to Tests' web application, but now with a user story entered. The 'Story Title *' field contains 'User Story: HC-287 - Dynamic Queue List of AHC (Enhanced Real-Time Filtering)'. The 'Description' field contains the text: 'The existing queue currently loads patient lists only once when the dashboard is opened. The new enhancement adds real-time auto-refresh logic and introduces dynamic filters for patient priority and status ("Waiting", "Under Examination", "Discharged"). The update ensures that queue order and color coding change instantly when the patient status changes in the system.' The 'Acceptance Criteria *' field contains three criteria: 'Given the doctor dashboard is open, when a patient status changes in the system, then the queue list should update automatically within 30 seconds.', 'Given the doctor wants to view only critical patients, when the "Emergency" filter is applied, then only patients with critical priority should be visible.', and 'Given the queue is auto-refreshed, then the UI should retain scroll position and active filters without manual reload.' The 'Additional Info' field is empty. The blue 'Generate' button remains at the bottom left. The browser's taskbar and system tray are identical to the previous screenshot.

Generated Test Cases			
30 test case(s) generated • Model: llama-3.3-70b-versatile • Input tokens: 510 • Output tokens: 2141 • Cost: \$0.001992 (est)			
Test Case ID	Title	Category	Expected Result
▶ TC-001	Auto-Refresh Queue List	Positive	Queue list updates automatically to reflect the changed patient status
▶ TC-002	Emergency Filter	Positive	Only patients with critical priority are visible
▶ TC-003	Auto-Refresh with Scroll Position	Positive	Queue list updates automatically and retains scroll position
▶ TC-004	Auto-Refresh with Active Filters	Positive	Queue list updates automatically and retains active filters
▶ TC-005	Invalid Filter	Negative	Error message is displayed
▶ TC-006	No Patient Status Change	Negative	Queue list does not update
▶ TC-007	Multiple Patient Status Changes	Edge	Queue list updates automatically to reflect all changed patient statuses
▶ TC-008	Large Number of Patients	Edge	Queue list updates automatically without performance issues
▶ TC-009	Unauthorized Access	Authorization	Access is denied

JIRA CONNECTOR IMPLEMENTATION STEPS

Please verify the below error message displayed when we click on "Fetch Jira Stories" button, analyse the error and show me the fix "Jira fetch failed: 410 [{"errorMessage":"The requested API has been removed. Please migrate to the /rest/api/3/search/jql API. A full migration guideline is available at https://developer.atlassian.com/changelog/#CHANGE-2046"},"errors":{}]}

Considered API updates

I found the Jira client is calling the deprecated /rest/api/3/search endpoint. I'm updating it to use the current /rest/api/3/search/jql API.

Edited jiraClient.ts +8 -9

Analysis

The error is caused by using the deprecated Jira endpoint:

- Used: /rest/api/3/search
- Required: /rest/api/3/search/jql

Jira now requires POST /rest/api/3/search/jql with a JSON body.

Fix applied

Updated jiraClient.ts :

- Changed endpoint to /rest/api/3/search/jql

> 1 file changed +8 -9

JIRA CONNECTOR IMPLEMENTATION STEPS

Frontend validation passed.

What changed

- Added Jira Project Key input to the UI
- Required it before fetching stories
- Constructed bounded JQL:
 - project = <KEY> ORDER BY created DESC
- Updated apits to send jql to /api/jira/stories

Why this fixes the error

Jira returned:

- Unbounded JQL queries are not allowed here

Because the request used no project restriction. Now the query is bounded to a selected Jira project.

Status

- Backend npm run typecheck already passed
- Frontend npm run typecheck now also passed

If you want, I can next add a Jira project selector dropdown fetched from the Jira API instead of manual key entry.

Jira-Fronend-Connector-Prompt.md

proceed and project selector dropdown fetched from the jira API insted of manual key entry

JIRA CONNECTOR IMPLEMENTATION STEPS

Searched for jiraFetchError and setJiraFetchError

I'm updating the UI to show Jira fetch errors and keep the improved styling.

Reviewed App.tsx and checked lines 120 to 301

The UI is already improved, but I need to surface Jira fetch errors and remove the unused hook if it's truly redundant. I'm checking the code path where `jiraFetchError` should render.

Searched for jiraFetchError in App.tsx

Updating the Jira panel to display fetch errors and ensure the improved UI is fully wired.

Updated App.tsx and ran command `+6 -0`

Ran `Set-Location -Path "d:\TestLeaf AI Master Class fo...`

UI refreshed

- Added a modern styled layout in `App.css`
- Improved form spacing, cards, buttons, and project/story panels
- Added Jira fetch error display for better feedback

✔ frontend

 typecheck passes after the UI update.

If you want, I can also add a compact mobile layout for smaller screens.

+ Jira-Fronend-Connector-Prompt.md

currently "Generate Test Case" section and "Jira Connector" sections are not alligned properly in UI. Can you verify and fix the UI Changes to give user look and feel better

JIRA CONNECTOR IMPLEMENTATION STEPS

currently "Generate Test Case" section and "Jira Connector" sections are not aligned properly in UI, Can you verify and fix the UI Changes to give user look and feel better

Adjusted UI alignment and reviewed layout strategy

Inspecting current layout and CSS details to realign the panels properly.

Reviewed App.css and fixed UI alignment issues

I found the likely cause: the right panel still has extra top spacing from .generator-form , so I'm tightening the grid and removing that margin.

Updated App.css and ran command +5 -2

Ran Set-location -Path "d:\TestLeaf AI Master Class fo...

UI alignment fix complete

Fixed .grid-row so both panels align vertically

Removed extra top margin from .generator-form

Ensured .panel uses flex layout for consistent height and alignment

frontend typecheck still passes.

JIRA CONNECTOR IMPLEMENTATION STEPS

I'm updating Jira story fetching to include description and acceptance criteria, plus adding story selection in the frontend.

Updated types.ts +77 -9

I've updated both backend and frontend; now I need to add a small CSS rule for selected Jira story styling and then run typecheck.

Updated App.css and ran command +48 -1

Ran Set-Location -Path "d:\TestLeaf AI Master Class fo...

Jira story detail support added

- Backend now requests **all** issue fields from Jira
- Story extraction includes:
 - description
 - acceptanceCriteria (explicit field or parsed from description)
- Frontend now:
 - stores selected story details
 - fills **Story Title**, **Description**, and **Acceptance Criteria** on selection
 - highlights the selected Jira story in the list

frontend typecheck passes.

Raptor mini (Preview) • 3.1 credits

Jira-Fronend-Connector-Prompt.md

"Story Title" and "Description" information is populationg as expected, but "Acceptance Criteria" for selected use story in not fetching from Jira, Verify and fix it
